CAREER OBJECTIVE

Highly motivated B.Tech graduate in Artificial Intelligence and Data Science with strong foundational knowledge in machine learning, data analysis, computer vision, and natural language processing. Gained practical exposure through academic projects such as sales prediction using machine learning, smart parking systems using computer vision, and NLP-based chatbot development. Also published research papers in reputed international journals on AI-based applications, demonstrating strong research, analytical, and problem-solving abilities.

Seeking an entry-level opportunity in a forward-thinking organization where I can apply my skills in Python, SQL, data visualization, and model development to solve real-world problems. Eager to continuously learn, adapt to emerging technologies, and grow into a skilled AI/Data Science professional who contributes effectively to organizational innovation and success.

WORK EXPERIENCE

Project Engineer Intern, Pantech Solution, Chennai — 6 Months
Internship experience as a Project Engineer.

EDUCATION

B.Tech Artificial Intelligence And DataScience, Erode Sengunthar Engineering College — 2021 - 2025
CGPA: 7.35/10.0 (First class)

XII-STANDARD, St.Antony's Matriculation and Higher Secondary School — 2021
PERCENTAGE: 84.5%

X-STANDARD, St.Antony's Matriculation and Higher Secondary School — 2019
PERCENTAGE: 83.4%

SKILLS

Languages	Python , SQL , HTML, CSS
Tools	MySQL , Power BI
Soft Skills	Leadership , Communication , Problem Solving , Time Management , Adaptability

PROJECTS

Sales Prediction Using Linear Regression

- Developed a sales forecasting model using Linear Regression in Python.
- Preprocessed data with Pandas and visualized insights using Matplotlib and Seaborn.
- Trained and evaluated the model using Mean Squared Error (MSE) and R^2 score.
- Achieved accurate sales predictions, supporting better business planning and demand analysis.
- Implemented the full pipeline: data cleaning, model training, evaluation, and result visualization.

Smart Parking System Using Computer Vision

- Built a Smart Parking System using Python, OpenCV, and Computer Vision techniques.
- Implemented object detection to monitor and count real-time vehicle occupancy in parking slots.
- Used image processing (grayscale conversion, contour detection, masking) to identify free/occupied spots.
- Optimized the system for real-time video feed to enable dynamic parking space updates.
- Aimed to reduce manual effort and parking time using automated detection and alert mechanism.

Chatbot for FAQ

- Developed an intelligent chatbot to answer frequently asked questions automatically.
- Used Natural Language Processing (NLP) to understand user queries.
- Implemented using Python, with libraries like NLTK/spaCy and a simple rule or ML-based logic.
- Preprocessed text data to improve understanding and matching of questions.
- Trained the chatbot to match user questions to the most relevant answers from an FAQ dataset.

CERTIFICATIONS

1. Artificial Intelligence, AICTE Parakh
2. Software programmer-HTML5, Skill India
3. Machine Learning, Infosys Springboard
4. Google cloud computing, NPTEL
5. Emotional Intelligence, NPTEL
6. Privacy and Security in online social media, NPTEL
